It currently the consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as truns of N, but the exact sizes of the apps are unknown.

All Submitssion

All Submitted (05-SEP-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1874, UK. E-mail enquiries: hunquery@sanger.ac.uk Clone requests: Clonerequest@sanger.ac.uk clone assembly data is compared from overlapping clones. Where differences are found these are annotated as variations. On Jun 26, 2000 this sequence version replaced from overlapping clones. Where differences are found these are annotated as variations to responding to the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence they may generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at thitp://www.sanger.ac.uk/HGP/Chr6

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such ascompressions and repeats; all regions were covered by at least one plasmid subolone or more than one M13 subclone; and the second one plasmid subolone or more than one M13 subclone; and the second of the sec
                                                                                                                                                                                                                                                                                                                                                               AL353759 101099 bp DNA linear PRI 05-SEP-2001 Human DNA sequence from clone RPI-221C16 on chromosome 6. Contains the 3' part of the HFE gene for haemochromatosis protein, two genes for novel histone 4 family members, two genes for novel histone 1 family members, three genes for novel histone 1 agene for a novel histone 2 agene for a novel histone 2 agene for a novel histone 2 agenes for novel 2 agenes 2 a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    assembly was confirmed by restriction digest. RP1-221C16 is from the library RPCI-1 constructed by the group of Pieter de Jong. For

                                                               products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal obelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            720

The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a 1-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

Tresults in a Cys Tyr substitution in the encoded protein (see AAM3649) at a critical disulphide bridge important for secondary structure. The following are claimed: the HH genomic DNA (1), a 1437 bp cDNA sequence (Ia) (see AAM36691) and their 24d1, 24d2 and their case of the HH gene product, its variants: a cloning or expression vector; host cells; a peptide product chosen from the HH gene product, its variants (24d1, 24d2 and 24d7), or a peptide of at least 56 amino acid to determine the presence or absence of the common HH gene cutation; an animal model for the H disease; metal chelation agents, T-cell differentiation factors and therapeutic agents for the mitigation of injury due to oxidative process in vivo or the reapeutic agents for activity in connection with HH disease; an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TCAGGATTTAAAAACCAAGGGGGACACTGGATCACCTAGTGTTTCACAAGCAGGTACCTT 180

                                                                                                                                                                                                                            Hereditary haemochromatosis gene and variants - useful for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                          This genomic DNA sequence corresponds to the human gene whose mutated form is associated with hereditary haemochromatosis (HH). To identify this novel gene, allelic association patterns were determined between known markers and the HH locus in the HLA region of chromosome 6. A physical clone coverage was then generated extending from D65255, which is a marker that is centromeric of the HLA-A, in a telonmeric direction through D65276, a marker at which the allelic association was no longer observed. A single mutation (24d1) in the HH gene appears responsible for the majority of HH disease. This comprises a G to A substitution that is present in 86% of affected chromosomes and in 4% of unaffected chromosomes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antisense oligonucleotide directed against a transcriptional product of a nucleic acid sequence as above; and oligonucleotides or pairs of oligonucleotides covering a range of nucleotides from (1), (1a) or their variants, useful for detecting a polymorphism in the HH gene. The invention also relates to methods for screening for HH homozygotes, to HH diagnosis, prematal screening and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CTGCTGTAGGAGAGAGAGAGTAAAGTTCTGAAAGACCTGTTGCTTTTCACCAGGAAGTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents the human histocompatibility iron loading (HFE) gene. The HFE gene is a major histocompatibility (MHC) non-classical class I gene located on chromosome 6p. Mutations in the gene lead to iron disorders. The specification describes a method for diagnosing an iron disorder or a genetic susceptibility to develop the absorder in a mammal. The method comprises determining the presence of a mutation in exon 2 or an intron of a HFE gene or protein. The mutation is not a C to G missense mutation at nucleotide 187 of the sequence given in A96769 (Genbank Accession number U60319). The presence of the mutation indicates the disorder or the genetic susceptibility to the disorder. The method is used to diagnose an iron disorder e.g. haemochromatosis, or a genetic susceptibility to develop it.

The present invention describes hereditary haemochromatosis gene products from the human haemochromatosis gene. The present sequence represents a hereditary haemochromatosis subregion from an hereditary haemochromatosis subregion from an hereditary haemochromatosis with a presence or absence of the common hereditary haemochromatosis (HFE) gene mutation in an individual comprising: haemochromatosis (HFE) gene mutation in an individual comprising: cap providing DNA or RNA from the individual; and (b) assessing the DNA or RNA for the presence of a haplotype genotype individual. The DNA or RNA for the presence of the haplotype genotype individual. The HFE gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present protein butyrophilin (FF), and can be used in the production of agonists of and antagonists of BT function. Also described are: (1) a Robet gene which are homologues of the milk products for use in the products for the study, diagnosis and treatment of lugues and Slogren's syndrome; and (2) NFT3 and can be used to develop products for the study, diagnosis and treatment of lugues and Slogren's syndrome; and (2) NFT3 and can be used to develop products for the study, diagnosis and can be used to develop the subject of the study.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bovine butyrophilin; BT; human hereditary haemochromatosis; HFE; diagnosis; iron metabolism; NPT3; NPT4; RoRet; BTF1; BTF2; BTF3; BTF4; BTF5; milk protein; lupus; Sjogren's syndrome; hypophosphatemia;

disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g. or preventing and/ for treating, polypeptide s related to diagnosis

English. Listing; Sequence + SEQ ID NO 3112; 781pp Example 2;

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antisquists are useful in the diagnosis, treatment of an prevention of: (a) cancer, e.g. breast and ovarian cancer and prevention of: (a) cancer, e.g. breast and ovarian cancer and coher cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune constructions of sissess, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as mycoardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. parasitic infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             οy
                                                                                                                                                                                                                                                                                                                                            The present invention describes hereditary haemochromatosis gene products from the human haemochromatosis gene. The present sequence represents a hereditary haemochromatosis (HH). Also described is a method to determine the presence or absence of the common hereditary haemochromatosis (HH). Also described is a method to determine the presence or absence of the common hereditary haemochromatosis (HFE) gene mutation in an individual comprising:

Ca providing DNA or RNA from the individual; and (b) assessing the DNA or RNA for the presence or absence of the haplotype genotype indicates the likely presence of the HFE gene mutation in the genome of the individual. The HFE gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present invention also describes BFF genes, which are homologues of the milk protein butyrophilin (BF), and can be used in the production of agonists and antagonists of BF function. Also described are: (1) a RoRet gene which can be used to develop products for the study, diagnosis and treatment of lupus and Sjogren's syndrome, and (2) NPT3 and NPT4 genes which are homologues of a type I sodium transport gene, and can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          47029
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    46969
